

Horizon Upgrade Guide

Sitecore Horizon on-prem and Azure 10.1

Upgrade to Horizon on-prem or on Azure 10.1 from Horizon 9.3-10.0.1

Upgrading to Horizon 10.1

To upgrade Sitecore Horizon to your target version, you must:

1. Uninstall the old version of the Horizon module. See the section for your version:
 - [Uninstall Horizon on-prem 10.0.0 or 10.0.1](#)
 - [Uninstall Horizon on Azure 10.0.0 or 10.0.1](#)
 - [Uninstall Horizon on-prem 9.3](#)
 - [Uninstall Horizon on Azure 9.3](#)
2. Upgrade your Sitecore instance.
3. Install the new Horizon package (see [Re-install Horizon](#)).

Uninstall Horizon on-prem 10.0.0 or 10.0.1

To uninstall Horizon on-prem:

1. In the Core database, delete the following item path:
 - `/sitecore/client/Applications/Launchpad/PageSettings/Buttons/ContentEditing/Horizon`
2. In IIS, delete your HorizonHostName site and application pool.
3. In the file system, delete the following directories:
 - `HorizonHostPhysicalPath` directory
 - `ContentManagementPhysicalPath\AppConfig\Modules\Horizon` directory
 - `ContentManagementPhysicalPath\AppConfig\Modules\Zenith` directory
4. In the `ContentManagementPhysicalPath\bin` directory, delete the following:
 - `Sitecore.Horizon.Editor.Integration.dll`
 - `Sitecore.Horizon.Insights.Integration.dll`
 - `Sitecore.Horizon.Integration.dll`
 - `Sitecore.Horizon.Integration.OnPrem.dll`
 - `Sitecore.Horizon.Simulator.Integration.dll`
 - `Sitecore.Zenith.GraphQL.dll`
5. In the `SitecoreIdentityServerPhysicalPath\Config\production\Sitecore.IdentityServer.Host.xml` config file, delete the following:
 - If you are uninstalling 10.0.1, delete:

```
<HorizonHttpsCorsOrigin> </HorizonHttpsCorsOrigin>
```
 - If you are uninstalling 10.0.0, delete:

```
<AuthoringHostHttpsCorsOrigin> </AuthoringHostHttpsCorsOrigin>  
<AuthoringHostHttpCorsOrigin> </AuthoringHostHttpCorsOrigin>
```

Uninstall Horizon on Azure 10.0.0 or 10.0.1

To uninstall Horizon on Azure:

1. In the Core database, delete the following item path:
 - o `/sitecore/client/Applications/Launchpad/PageSettings/Buttons/ContentEditing/Horizon`
2. In App Services on Azure Portal:
 - o Delete your Sitecore Horizon Host service named `your deployment id-hrz`.
 - o Delete your Sitecore Horizon Host hosting plan named `your deployment id-hrz-hp`.
3. Access the file system of the Sitecore Content Management service named `your deployment id-cm service` or `deployment id-single service` (this depends on your topology).
4. In the file system, delete the `wwwroot\AppConfig\Modules\Horizon` and `wwwroot\AppConfig\Modules\Zenith` directories.
5. In the `wwwroot\bin` directory, delete the following:
 - o `Sitecore.Horizon.Editor.Integration.dll`
 - o `Sitecore.Horizon.Insights.Integration.dll` (in case you have XP topology)
 - o `Sitecore.Horizon.Integration.dll`
 - o `Sitecore.Horizon.Integration.OnPrem.dll`
 - o `Sitecore.Horizon.Simulator.Integration.dll`
 - o `Sitecore.Zenith.GraphQL.dll`
6. Access the file system of the Sitecore Identity server named `your deployment id-si` and delete `wwwroot\Config\production\Sitecore.IdentityServer.AuthoringHost.xml`.

Uninstall Horizon on-prem 9.3

To uninstall Horizon on-prem:

1. In Sitecore Experience Platform, in the Master database, delete the following item paths (if you have XM topology installed, skip this step):
 - o `/sitecore/system/Marketing Control Panel/Experience Analytics/Dimensions/Pages/By page/Computer`
 - o `/sitecore/system/Marketing Control Panel/Experience Analytics/Dimensions/Pages/By page/MobilePhone`
 - o `/sitecore/system/Marketing Control Panel/Experience Analytics/Dimensions/Pages/By page/Tablet`
 - o `/sitecore/system/Marketing Control Panel/Experience Analytics/Filters/Computer`
 - o `/sitecore/system/Marketing Control Panel/Experience Analytics/Filters/MobilePhone`
 - o `/sitecore/system/Marketing Control Panel/Experience Analytics/Filters/Tablet`

Horizon Upgrade Guide

2. In the Core database, delete the following item path:
 - o /sitecore/client/Applications/Launchpad/PageSettings/Buttons/ContentEditing/Horizon
3. In IIS, delete your HorizonHostName site and application pool.
4. In the file system, delete the following directories:
 - o HorizonHostPhysicalPath directory
 - o ContentManagementPhysicalPath\AppConfig\Modules\Horizon directory
 - o ContentManagementPhysicalPath\sitecore\shell\client\Applications\HorizonCanvas directory
5. In the ContentManagementPhysicalPath\bin directory, delete the following:
 - o Sitecore.Horizon.Editor.Integration.dll
 - o Sitecore.Horizon.Insights.Integration.dll
 - o Sitecore.Horizon.Integration.dll
 - o Sitecore.Horizon.Simulator.Integration.dll
6. In the SitecoreIdentityServerPhysicalPath\Config\production\Sitecore.IdentityServer.Host.xml config file, delete the following:

```
<AuthoringHostHttpsCorsOrigin> </AuthoringHostHttpsCorsOrigin>  
<AuthoringHostHttpCorsOrigin> </AuthoringHostHttpCorsOrigin>
```

Uninstall Horizon on Azure 9.3

To uninstall Horizon on Azure:

1. In Sitecore Experience Platform in the Master database, delete the following item paths (if you have XM topology installed, skip this step):
 - o /sitecore/system/Marketing Control Panel/Experience Analytics/Dimensions/Pages/By page/Computer
 - o /sitecore/system/Marketing Control Panel/Experience Analytics/Dimensions/Pages/By page/MobilePhone
 - o /sitecore/system/Marketing Control Panel/Experience Analytics/Dimensions/Pages/By page/Tablet
 - o /sitecore/system/Marketing Control Panel/Experience Analytics/Filters/Computer
 - o /sitecore/system/Marketing Control Panel/Experience Analytics/Filters/MobilePhone
 - o /sitecore/system/Marketing Control Panel/Experience Analytics/Filters/Tablet
2. In the Core database, delete the following item path:
 - o /sitecore/client/Applications/Launchpad/PageSettings/Buttons/ContentEditing/Horizon
3. In App Services on Azure Portal:
 - o Delete your Sitecore Horizon Host service named your deployment id-ah.

- o Delete your Sitecore Horizon Host hosting plan named `your deployment id-ah-hp`.
4. Access the file system of the Sitecore Content Management service named `your deployment id-cm service` or `deployment id-single service` (this depends on your topology).
5. In the file system, delete the `wwwroot\AppConfig\Modules\Horizon` directory.
6. In the `wwwroot\bin` directory, delete the following:
 - o `Sitecore.Horizon.Editor.Integration.dll`
 - o `Sitecore.Horizon.Insights.Integration.dll`
 - o `Sitecore.Horizon.Integration.dll`
 - o `Sitecore.Horizon.Simulator.Integration.dll`
7. Delete the `wwwroot\sitecore\shell\client\Applications\HorizonCanvas` directory.
8. Access the file system of the Sitecore Identity server named `your deployment id-si` and delete `wwwroot\Config\production\Sitecore.IdentityServer.AuthoringHost.xml`.

Re-install Horizon

Upgrade your Sitecore instance to your preferred version and then follow the Horizon on-prem installation guide or the Horizon on Azure deployment guide to install the Horizon module. For a successful installation, you must use corresponding versions of the Sitecore Instance and the Horizon module.
